Levels of Treatment for Acne, Congested Pores & Problem Skin

LEVEL 1: Mild cases of congestion, impurities, and oily behaviors will be alleviated through a regimen of an exclusive Hydra-purification treatment to properly exfoliate and deeply clean away bacteria and pollution in the skin.

This effective treatment will not irritate or aggravate the skin and is a very effective problem solver when maintained with proper skincare to prevent further acne and excessive oil production.

LEVEL 2: A series of clarifying peels to lift even the most stubborn blackheads and whiteheads through dissolving keratin buildup and encouraging faster, healthier cell renewal. These clarifying peels also help smooth away minor to moderate acne scars and environmental damage; leaving a smoother and more even complexion.

It is strongly advised that the great results achieved through these peels be maximized and maintained through occasional Hydra-purification procedures and an effective at-home skincare program.

LEVEL 3: Matrix Fractional Laser reconditioning using intense pulsed light and controlled thermal energy will not only regulate further damage but correct the source of this concern in moderate to severe cases. This procedure immediately 'reprograms' the cellular behavior and triggers collagen production to reveal a new and clear complexion that is virtually free of even the oldest and most severe scars.

It is vital that these cases maintain a strict program of Hydra-purification procedures and an appropriate skincare system for the correction, prevention, and maintenance of problem skin.
