Levels of Treatment for Dry/Dehydrated Skin

LEVEL 1: The exclusive Hydra-infusion treatment allows for effective exfoliation and renewal through transfusing healing serums into the deepest layers of dry, dull skin. This process is very safe even for extremely dry skins and will leave no sign of irritation or discomfort.

It is extremely beneficial to maintain an excellent skincare program to protect this delicate skin from the environment and to keep the moisture barrier of the skin functioning properly.

LEVEL 2: Replenishing peels will dissolve the layers of dry, flaky skin away to reveal thicker and less fragile skin, allowing for maximum absorption of moisture that helps eradicate discomforts associated with dehydrated skin.

This series of peels also adjusts the levels of oil and water in the skin so that all at home products and Hydra-infusion treatments can work at maximum effectiveness.

LEVEL 3: Did you know that dry skin shows signs of age and environmental exposure faster and more noticeably than any other skin? A weak moisture barrier allows environmental aggressors to enter and destroy the skin at an alarming rate. In extreme cases this extensive repair requires our Renewal Treatment to erase redness, capillaries, and lines and wrinkles that have progressed beyond the point of basic skincare and even chemical peels. This series of laser treatment synthesizes the production of collagen in the skin to plump the lines & folds from within. Redness disappears. Stressed skin vanishes.

The maintenance of proper skincare and frequent facials done in conjunction with Hydra-infusion sessions is of utmost importance in this skin condition.
