Levels of Treatment for Rosacea and Sensitive Skin

LEVEL 1: Hydra-vitalization smoothes skin by removing keratinocytes and buildup while protecting the integrity of even extremely sensitive skin. This skin type can benefit when a custom European Facial is incorporated into this treatment to relax the tense, reactive skin.

Hydra-vitalization allows deep purification without the extreme long lasting redness or flare-ups that commonly occur. Regular sessions will desensitize the epidermis and infusion of TNS serum will repair and allow it to function at a more vital and resilient level alongside a custom skincare system that further protects from rosacea flares.

LEVEL 2: Revitalizing peels delivered in a series of applications are highly effective when carefully measured and tailored to the intensity of this delicate skin. This will remove clogged pores and keratin buildup that is commonly found in these conditions without manual extractions or physical exfoliation.

An even tone and texture is enhanced by the appropriate at home maintenance and routine procedures of Hydra-vitalization.

LEVEL 3: An innovative Dermal Stimulation procedure allows for superior elimination of vessels, capillaries, and inflammatory damage. Texture, clarity, and tone in the skin is restored. Intense Pulsed Light combines with targeted radio frequency to correct the signs left behind from years of irritation and inflammation by promoting the creation of new and healthy cells to prevent further damage.

Vitalizing peels delivered on a consistent basis keep the pores clean and encourage fast natural exfoliation of the skin. Soothing rosacea and sensitive skin facials paired with a manageable skincare program further heighten and prolong the results of your investment. An effective and gentle sunscreen is mandatory.
