Levels of Treatment for Discolored & Uneven Skin

LEVEL 1: Mild cases of patchy, rough, and discolored skin will benefit greatly from simple applications of Hydra-dermabrasion procedures to repair sun damage and uneven tone.

This is safe for any age and type of skin and will result in a radiant and even complexion when delivered in consistently scheduled treatments. We recommend that the client also incorporate an antioxidant rich skincare routine.

LEVEL 2: Moderate cases of uneven tone and texture require an intensive program of revitalizing chemical peels to thoroughly exfoliate and detoxify the epidermis so that a smooth and radiant result is achieved. Secondary benefits also include the diminishment of fine lines.

Hydra-dermabrasion procedures are necessary to maintain the clarity of the new skin as well as a simple yet effective skincare system to protect it.

LEVEL 3: Extreme hyperpigmentation and inconsistent texture call for our Renew Fotofacial procedure. This series of treatment will eliminate sun damage, capillaries, and create perfect tone and texture. This non-invasive procedure has minimal downtime and combines the latest and most intensive IPL and gentle RF energy to correct and eradicate the clusters of melanin that result from poor sun protection and genetic disposition.

Revitalizing peels and Hydra-dermabrasion will enhance the clarity and healthy function of your restored radiance and proper, consistent skincare at home will protect your skin from free radicals and the toxic rays of the sun.
