Skin Assessment

Lines? Loss of
Elasticity?

Maturing Skin?

Just because
we can't stop
time doesn't
mean we
can't look
more youthful.
Choose your
Level of Treatment
to look a little or a
lot younger.

Levels of Treatment for Wrinkles & Maturing Skin

LEVEL 1: Mild signs of lines and wrinkles benefit from Hydra-rejuvenation treatments. The gentle infusion of healing serums into the epidermis thoroughly exfoliates while plumping up fine lines and assist in breaking down clusters of melanin without any irritation or discomfort. This procedure also restores natural moisture production in the skin so that a parched appearance and texture common in menopausal skin becomes dewy and lustrous.

At home therapy combines anti-oxidant packed treatments that are also full of moisture to cushion and protect the skin and to keep a fresh complexion.

LEVEL 2: Rejuvenating peels will intensely exfoliate and invigorate your skin- allowing the younger, healthier cells to move to the surface faster. A bright and smooth complexion that is firmer and softer to the touch results from just the right amount of routine peels and anti-aging European facials to relax the skin, mind, and body; especially in menopausal and postmenopausal skin.

Maturing skin is extremely fragile and approximately 95% of lines and wrinkles are caused by sun exposure so a highly protective skincare system is the only way to help prevent external aggressors from further destroying the epidermis.

LEVEL 3: Dermal Restructuring is the ultimate in anti-aging treatment programs. With the Triniti program dermal remodeling, tightening, and color correction is achieved. Give your complexion a clean slate and a vital, youthful contour. Watch crow's feet and deep lip wrinkles fade away. Feel and observe a lifted and illuminated visage. All of this without the extremity of cosmetic surgery or the potential risks; not to mention the obvious and embarrassing healing and recovery time that comes with it. This is a way to fix it, not fake it. Triniti series will encourage the epidermis to behave as it did in its youthful state and will result in a natural change in the resiliency and elasticity in the skin. This is maximum skin rejuvenation at its fastest and most effective form for moderate to severe concerns.

A cushioned, tighter, and more uniformed appearance is maintained through scheduled chemical peels and anti-age targeted skincare.
